T.W. FRIERSON COMPLETED POLARIS' NEW FACILITY ON AN ACCELERATED SCHEDULE. BY JIM HARRIS

**T**.W. Frierson Contractor Inc.'s long history of self-performing projects, as well as its experience with Butler pre-engineered building systems, made it the ideal building partner for one of the world's largest vehicle manufacturers.

The Nashville-based company in April expects to turn over the final completed portions of a 775,000-square-foot manufacturing facility in Huntsville, Ala., for Polaris Manufacturing Inc. The facility will be the first in the southern United States for Polaris, a global leader in the design and production of snowmobiles as well as all-terrain, sport utility and recreational vehicles.

Construction on the facility started in May 2015. The project was a joint design/build effort between T.W. Frierson and Design Constructors Inc., the contractor's in-house architectural firm. Doug Wilkening and Craig Polanchich were the project architects working on the facility's design. The T.W. Frierson construction team is led by Senior Project Manager John French as well as the project's General Superintendent Tommy Manley, Superintendent Jason Watson and Safety Coordinator Ronnie Bush.

"We were selected for this project in part for our capability to respond to the fast schedule, as well as our ability to

self-perform concrete, tilt-up concrete walls, structural steel and the standing seam roof," T.W. Frierson Senior Vice President David Bockian says.

The company is using an integrated project delivery approach. "IPD is the current industry buzzword, but our unique brand has been providing communication and synergy to clients for decades," Bockian says. "There are few companies that can duplicate the continual flow of information and feedback between our designers, our construction team and the owner like our group.

"Constant coordination and input from

the Polaris team on process and interface brought all facets of the project's development online together," he adds. "Everything was done with transparent communication relative to pricing, schedule and primarily safety concerns." The City of Huntsville, Ala., also worked with both T.W. Frierson and Polaris throughout the project to make sure vehicles were being produced on the rapid schedule.

T.W. Frierson also worked closely with Design Systems Builders, a wholly owned subsidiary of the company that specializes in the installation of pre-engineered systems by Butler Manufacturing, Inc. The Design Systems Builders team working on the project includes Project Managers Guy Harris and Matthew Howell and Project Superintendent Alan Quam. In terms of sales volume, T.W. Frierson has "been the

## MAKE AN INVESTMENT FOR TODAY AND THE FUTURE

Whether you are the architect, the general contractor, or the end-user, Rite-Hite and our Distribution Network has the experience and products to help you build your new facility or remodel your existing facility.

**RITE·HITE®**  
ALWAYS LOOKING AHEAD

**Trust Rite-Hite to be your industrial building and design partner.**

Find a Rite-Hite Representative near you by visiting [www.RiteHite.com](http://www.RiteHite.com) or calling 1.800.823.4139

**Rite-Hite®** is a world leader in the manufacture, sale, and service of loading dock equipment, industrial doors, safety barriers, HVLS fans, industrial curtain walls, and more.

**Innovative Solutions:** From the beginning, Rite-Hite placed an emphasis on research and development. Our ongoing evolution of products and services is fueled by our commitment to innovation and desire to provide effective solutions to customers.

**Customer Focused:** In addition to manufacturing high-quality equipment, Rite-Hite uses a relationship based approach to fulfill customer needs through our Global Distribution Network. Rite-Hite representatives can provide product solutions, service, and expertise to their local customers, at the loading dock, and inside the facility.

largest Butler builder in the country four times in the past 12 years," Bockian adds.

Founded in 1958, and based in Nashville, Tennessee, T.W. Frierson specializes in developing and building industrial complexes, institutional facilities, distribution centers and senior living facilities in the eastern half of the United States.

## An All-in-One Facility

The new Polaris facility will house several manufacturing processes including vehicle assembly, chassis and body painting, welding, fabrication and injection molding. The facility will initially produce Polaris' Ranger side-by-side utility vehicles. Ranger vehicles feature a pickup truck-like storage bed in their back, making them ideal for use in construction, farming and other industries. "They will perform the whole manufacturing process here, from receiving raw materials to shipping out finished vehicles," Bockian says.

T.W. Frierson and Design Constructors Inc. worked closely with Polaris Operations Project Director Keith Otterstatter during the design process. "Design Constructors has been very creative when it comes to working with Polaris to solve design issues," he adds. The contractor and client worked together to fit 85,000 square feet of administrative and staff spaces such as a cafeteria into the building while maximizing the space available for manufacturing.

The single-story facility includes a 40,000-square-foot mezzanine that will house office and administrative functions, with the cafeteria and other staff spaces located beneath the mezzanine.

The entire building will be air conditioned. "We're not used to seeing that in industrial facilities of this size in the South," he adds. "Polaris feels that, since they're investing time and resources training their workforce, they want them develop with the company. Employees' comfort in the workplace is very important to them."

In addition to the main manufacturing facility, T.W. Frierson Contractor was also contracted to build a 185,000-square-foot logistics center on land adjacent to the manufacturing facility. Work on the project started in February and will be completed in August. The building will be used to coordinate the receipt of raw materials or product components from other Polaris facilities or third-party vendors and will include warehouse, subassembly and ancillary spaces.

## A Smooth Process

T.W. Frierson and its partners worked closely with Polaris and process contractor TTX throughout the construction process. T.W. Frierson was tasked with meeting several deadlines for turning over key areas of

the building, which would then be outfitted with manufacturing equipment. "Our biggest challenge was the schedule, which was very aggressive," Bockian says. "Our theme from Polaris from day one was that they wanted to get these spaces up and available for equipment installation as soon as they could."

The contractor coordinated its schedules with TTX in such a way that allowed the interiors to be built out while other portions of the building were still being placed and topped off. "Everything came together for us really well," he adds. "Our goal was not

to be a concern to them, but allow them to develop their process smoothly."

T.W. Frierson also worked closely with subcontractors including electrical contractor C.O. Christian & Sons, mechanical contractor Comfort Group and sprinkler contractor Fire Protection Systems Inc.

This project is the first time T.W. Frierson has worked with Polaris. "I believe that they are very pleased with how our unique skill set and process has worked, and we are very appreciative of this new relationship with Polaris," Bockian notes. ♦
